## SUMMARY

Fullstack JavaScript Developer (React/Next.js, Node.js) with over 1 year of commercial experience. Experienced in collaborative development, software architecture design, API integration, and building high-performance, maintainable web applications with a clean TypeScript codebase and a strong focus on UX and business logic.

---

## TECH STACK

- **Frontend:** TypeScript, React, Next.js, Vue 3
- **Backend:** Node.js, Express.js, NestJS
- **Databases:** PostgreSQL, MySQL, Supabase
- **Styling:** Tailwind CSS, Bootstrap, Ant Design
- **Tools:** Git, Vite, Webpack, REST API, JWT

## Education

MetaLabs  
Fullstack Developer Program  
2025

---

## EXPERIENCE

### Fullstack JavaScript Developer (Freelance)

February 2025 – Present

Developing commercial web applications and e-commerce platforms using React, Next.js, TypeScript, Node.js, and NestJS. Designing frontend architecture, implementing new features, integrating REST APIs, working with databases, testing, performance optimization, deployment, and ongoing technical support.

### Key Projects

«Smola flower» — Fullstack SPA | <https://smola-flower.vercel.app> | [Github](#)

Built an e-commerce application using Next.js and NestJS with a modular architecture. Designed the frontend using the FSD architecture, implemented Zustand (persist), and integrated Supabase (PostgreSQL) and a Telegram Bot (Telegraf). Developed a product catalog with filtering and recommendations, implemented CRUD operations with DTO validation, and wrote unit tests using Jest. Leveraged SSR/ISR for SEO and secure client-server communication.

«PUBG weapons hub» — React SPA | <https://pubg-weaponshub.vercel.app> | [Github](#)

Developed a SPA using Next.js (App Router), React, and TypeScript. Implemented a custom weapon build system with a proprietary Score Engine, attachment compatibility validation, and weapon stat comparison across different distances. Built a responsive UI with Tailwind CSS, implemented data visualization using Recharts, and optimized calculations with useMemo.

«Paint.kg» — Legacy Bitrix MPA | <https://paint.kg>

Refactored a legacy Bitrix project and transformed it into a full-featured B2B/B2C e-commerce platform. Implemented a hybrid content architecture by replacing Bitrix infoblocks with the Google Sheets API. Integrated the Telegram Bot API for processing shopping cart orders and optimized the user interface and application performance.
